

MHF 4UI UNIT 5

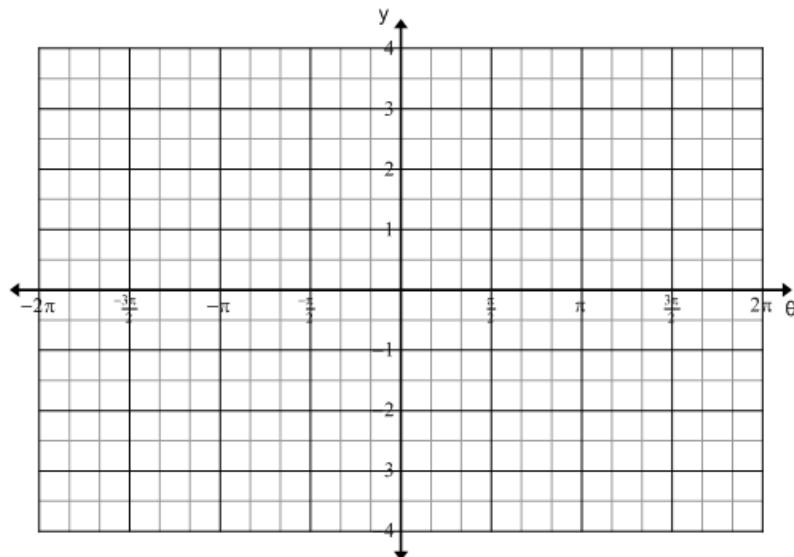

Trigonometric Functions

Day 3 - Graphing Trig Functions (Part I)

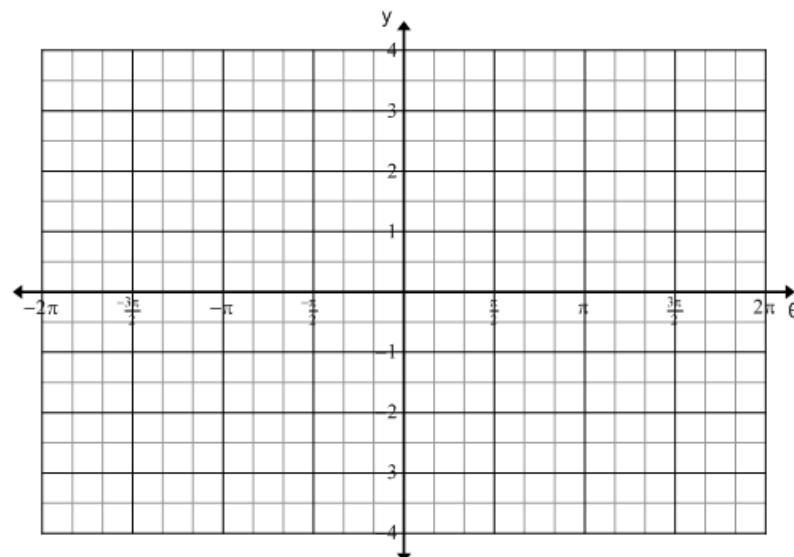

Basic Graphs:

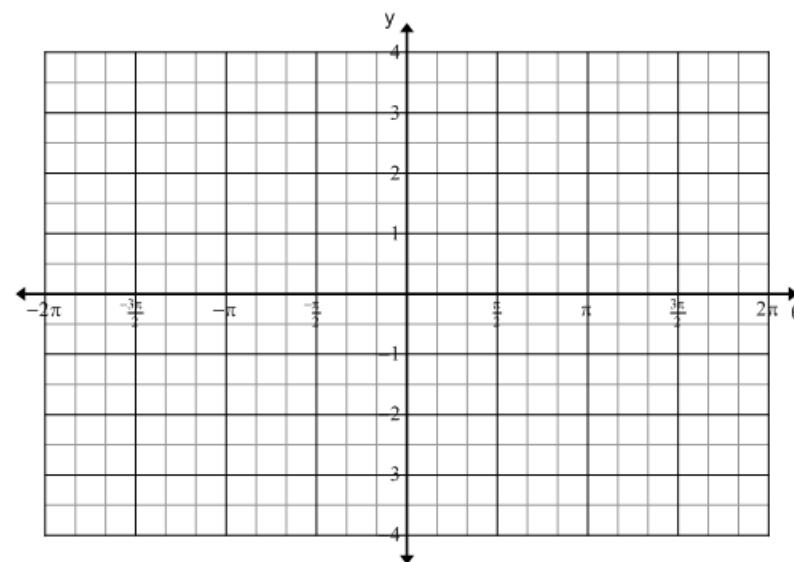

$$y = \sin \theta$$

$$y = \cos \theta$$

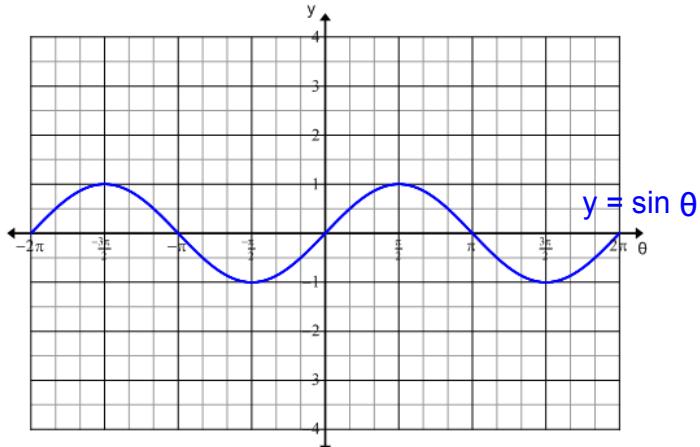

$$y = \tan \theta$$

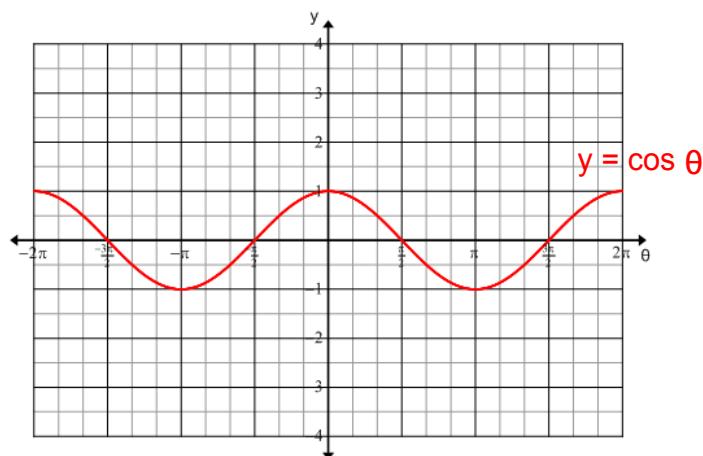

Inverse Graphs:

** Remember for an inverse we switch the x and y values

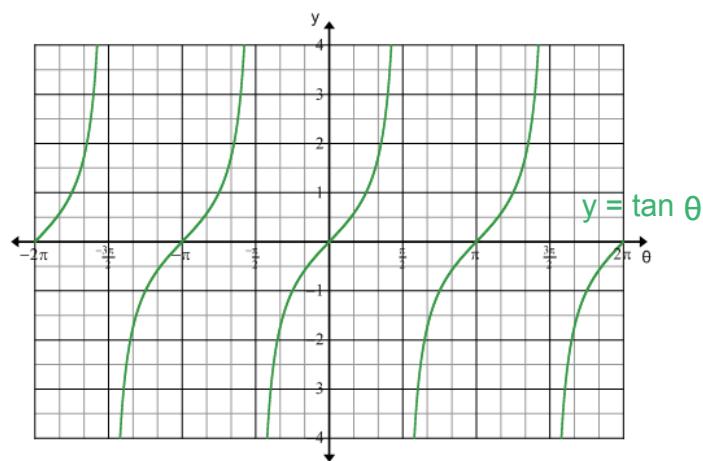

$$y = \sin^{-1} \theta$$

$$y = \cos^{-1} \theta$$

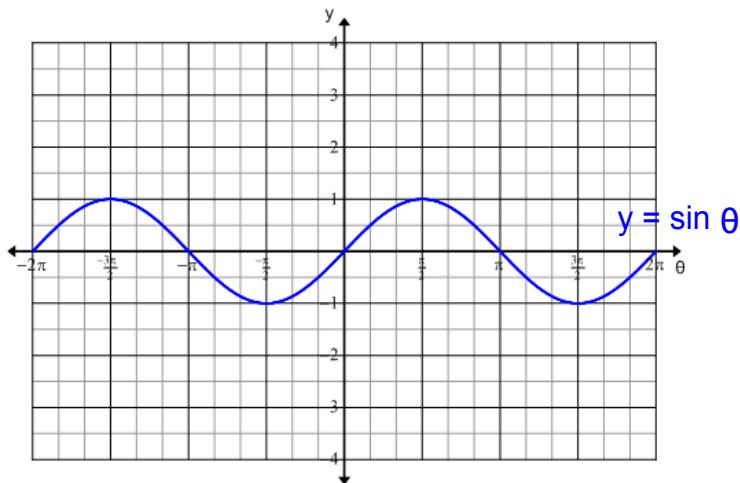

$$y = \tan^{-1} \theta$$

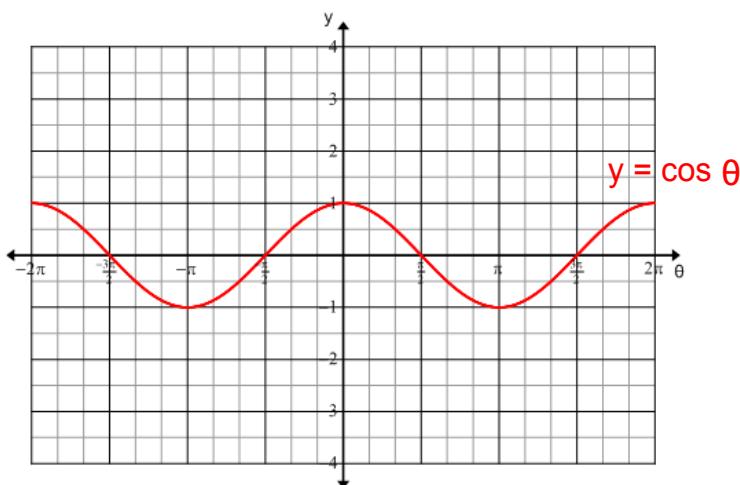

Reciprocal Graphs:

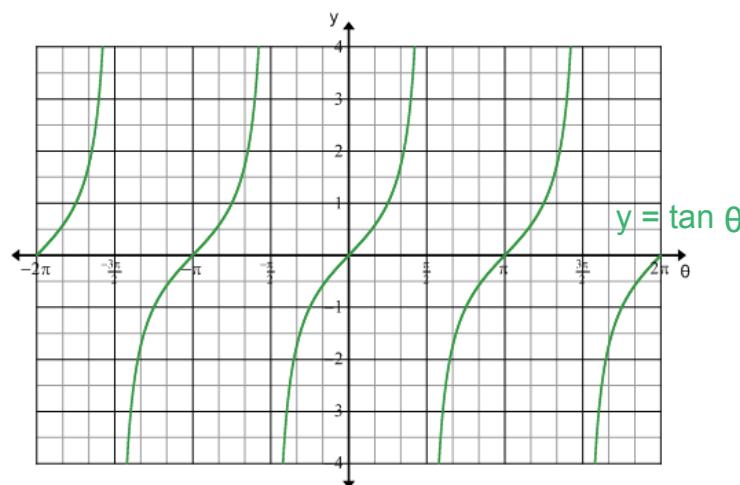

$$y = \csc \theta$$

$$y = \sec \theta$$

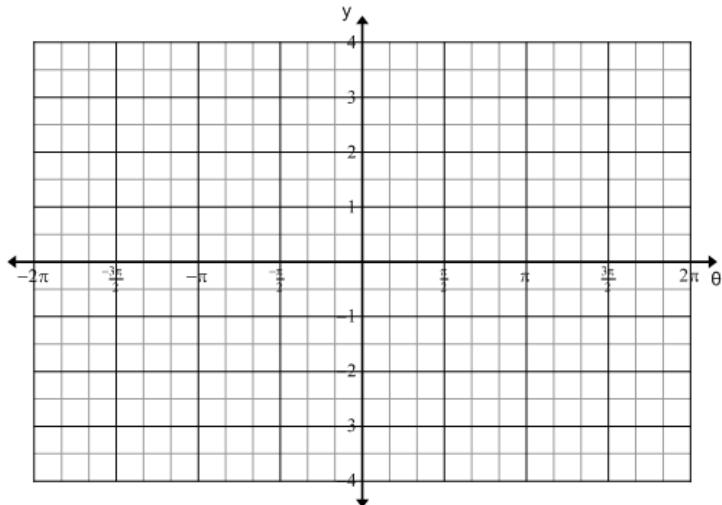

$$y = \cot \theta$$

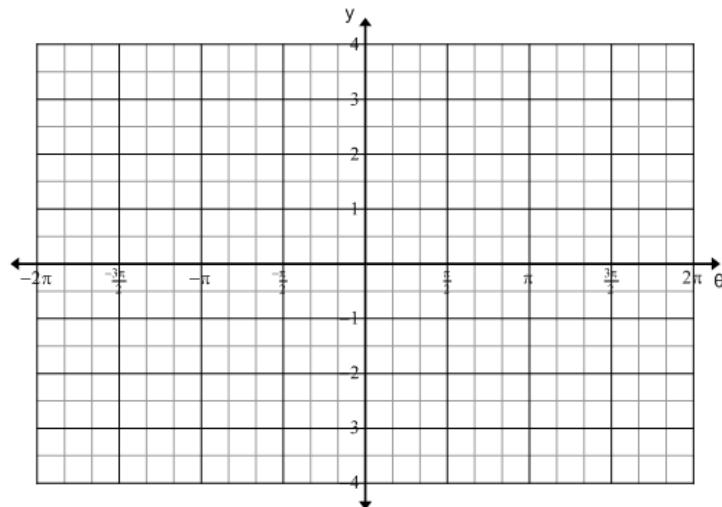

Transformations:

Example 1: Graph two complete cycle of each of the following curves (in radians):

$$y = \sin \theta + 1$$

$$y = -3\cos\theta$$

$$y = -2\sin \theta - 1$$
