

# PIN-HOLE CAMERA CONSTRUCTION

SECTION A

MATERIALS:

- 1/2 SHEET BRISTOL BOARD
- ALUMINUM FOIL
- TAPE
- PIN
- SINGLE HOLE PUNCH
- SCISSORS
- RULER / METRE STICK
- WAX PAPER
- GLUE

SECTION B

- CUT
- SCORE
- GLUE or TAPE

## Procedure

1. Cut out and assemble sections A and B as shown on the reverse side of this hand out. Make sure that section A will slide into section B as shown in the diagram above.
2. Cover the hole in the end of section B with foil and tape it down. Use a pin to poke a single hole in the foil.
3. Over the open end of section A, directly behind where the hole in the foil would be, tape down a piece of wax paper. Try not to "buckle" the open end of section A when doing this.
4. CLEAN UP! Equipment is returned and the scrap pieces of black cardboard are put into the garbage, NOT left lying around on the floor, desk, etc.
