

**Warm Up:** A) State the inverse of  $P = \{(2,3), (4,5), (9,-2)\}$

B) Graph the inverse of each of the following and identify domain and range of the original and the inverse graph:

**Inverses (continued):**

Method for finding the equation of an inverse (continued)

1. Determine the inverse of  $f(x) = x^2 - 2$ , and graph both functions.

$f(x)$  is a \_\_\_\_\_  
 that opens \_\_\_\_\_  
 and has a vertex of (\_\_\_\_, \_\_\_\_).

$f^{-1}(x) \Rightarrow$

State the Domain and Range of each

$f(x)$   
 D: { \_\_\_\_\_ }  
 R: { \_\_\_\_\_ }

$f^{-1}(x)$   
 D: { \_\_\_\_\_ }  
 R: { \_\_\_\_\_ }

Is  $f^{-1}(x)$  a function?

Is it possible to make  $f^{-1}(x)$  a function?

2. Determine the equation of the inverse for each of the following functions and identify if the inverse is a function:

a.  $q(x) = \frac{1}{x-2}$

b.  $f(x) = 5x^2 - 2$

c.  $g(x) = 3x^2 - 6x + 11$

Reflective Property for Inverses

The following are inverses of each other.

The graph of  $y = f^{-1}(x)$  is the reflection of the graph  $y = f(x)$  in the line \_\_\_\_\_.

**Note:** the inverse in the first graph is not a function due to the

The cost of a pizza is \$8 plus \$1.25 per topping.

a) Write an equation of Cost as a function of number of toppings.

b) State the domain and range.

c) Find the inverse, and explain its meaning. (On reverse)
