Vertical Shifts:

$$
\begin{aligned}
& y=\sin x+c \\
& y=\cos x+c
\end{aligned}
$$

This is the same as vertical shifts with other functions.

* If $c>0$, shift the $y$-values up $c-u n i t s$.
* If $\mathrm{c}<0$, shift the y -values down $\mathrm{c}-$ units.

The "sinusoidal axis" is at $y=c$

Example 1: Sketch the graph of $y=\sin x$ and $y=\sin x+2$ (use the 5 key points) NOTE: If it does not say how many cycles to sketch then you must fill the grid.

| $x$ | $\sin x$ | $\sin x+2$ |
| :---: | :---: | :---: |
| $0^{\circ}$ |  |  |
| $90^{\circ}$ |  |  |
| $180^{\circ}$ |  |  |
| $270^{\circ}$ |  |  |
| $360^{\circ}$ |  |  |

## Horizontal Shifts (also known as PHASE SHIFTS)

$$
\begin{array}{l|l}
y=\sin (x-d) \\
y=\cos (x-d)
\end{array} \quad \begin{aligned}
& \text { This is the same as horizontal shifts with other functions. } \\
& * \text { If } \mathrm{d}<0 \text {, i.e., the bracket looks like ( } \mathrm{x}+\text { number), shift the graph left d units. } \\
& * \text { If d }>0 \text {, i.e., the bracket looks like ( } \mathrm{x} \text { - number), shift the graph right } \mathrm{d} \text { units. }
\end{aligned}
$$

Example 2: Sketch one cycle of $y=\cos x$ and $y=\cos \left(x+30^{9}\right)$ on the grid below.

| $y=\cos x$ | $\left(0^{\circ}, \quad\right)$ | $\left(90^{\circ}, \quad\right)$ | $\left(180^{\circ}, \quad\right)$ | $\left(270^{\circ}, \quad\right)$ | $\left(360^{\circ}, \quad\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $y=\cos \left(x+30^{\circ}\right)$ |  |  |  |  |  |

Amplitude:

Sinusoidal Axis:

Period:

Domain:

Phase Shift:

Range:

Example 3: Sketch two cycles of $y=\cos x-3$ and $y=\cos \left(x-45^{\circ}\right)-3$ on the grid below.

| $y=\cos x-3$ | $\left(0^{\circ}, \quad\right)$ | $\left(90^{\circ}, \quad\right)$ | $\left(180^{\circ}, \quad\right)$ | $\left(270^{\circ}, \quad\right)$ | $\left(360^{\circ}, \quad\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $y=\cos \left(x-45^{\circ}\right)-3$ |  |  |  |  |  |

Amplitude:
Period:
Phase Shift:

Sinusoidal Axis:
Domain:
Range:

Example 4: If the amplitude is 6 , the sinusoidal axis is $y=-3$, period is $600^{\circ}$ and the phase shift is $60^{\circ}$ to the right, determine the equation of the sine function.

Example 5: Given the equation $y=\frac{1}{5} \sin \left(\frac{3}{2}\left(x+120^{\circ}\right)\right)+7$, identify:

| Amplitude: | Period: | Phase Shift: |
| :--- | :--- | :--- |
| Sinusoidal Axis: | Max value: | Min value: |
| Domain: | Range: |  |
